JAVISZAKI, A

Method of controlling the dyeing process with azo dyes (see colour).
 R. Janitzewski (Proc Inst. Text. Inst., 1958, 1, 1-7). The colour
 of azo dyes which form directly on the fibre by combining
 naphthols with diazo bases. The process of dyeing consists thus in
 (a) saturating the fabric with the naphthol solution (inactive
 constituent), and (b) development of the saturated fabric in a
 solution of the diazo base (active constituent). Analytical methods
 for determining (a) the ability of complex formation of the "in-
 active" dye constituents (determination of anilide by saponification
 with NaOH, iodimetrically, or from its solubility in pyridine), and
 (b) the active dye components by means of the diazo reaction,
 are described, and their application in controlling the ratio of
 naphthol and diazo base in the dye bath is considered. Titimetric
 determination of the quantity of naphthol absorbed on the fibre
 and photometric evaluation of the colour intensity, carried out on
 the dye extracted from the material, are also discussed.

Chem ✓ Conditions for washing fabrics naphtholated after printing. Karol Janiszewski (Prace Inst. Włók., 1939, 4, No. 18, 18-21). The purpose of washing is to remove naphthol from places not covered by the pattern (i.e., to remove the reaction products of CO₂ and naphthol, as well as the excess of base not combined with naphthol and the thickeners used in printing dyes). After analysing the washing process, examination was made of the properties (lathering and wetting power, stability to hard water, acids and alkalis, emulsifying and detergent power) of various Polish detergents. The removability of naphthol by washing was measured analytically and the degree of whiteness photometrically. Laboratory results based on the use "Saponol Alpha" and NaOH were confirmed under industrial conditions. The method eliminates the use of soap and makes it possible to obtain improved whiteness and quality.

Abstract : A study of the conditions of dyeing of textile materials
with salts of Variamine Blue B and Variamine Blue RT (of
Polish manufacture) and, in particular, of the influence
of the pH, conditions of neutralization, and the buffer-
conditions of diazo-solutions during azo-coupling.
A number of auxiliary agents were tested, which

✓ Janiszewski T. Recording the Time Required for Stopping Power Presses Equipped with Electronic Safety Devices

Polish Technical Abst.
No. 1 1954
Mechanics, Electrotechnics,
Power

„Pomiar czasu zatrzymywania się prasy sterowanej za pomocą urządzenia z fotokomórką” (Prace Centr. Inst. Ochr. Pracy No. 1(6)), Warszawa, 1953, PWT, 13 pp., 18 figs., 5 tabs.

Electronic stopping devices using a photo-electric cell are being widely used as a means of safeguarding power press operators. Accurate determination of the time intervening between the cutting of the light beam and the moment of stopping the ram is of paramount importance from the point of work safety. The author deals with the methods of ascertaining arresting time in the case of presses equipped with electronic safety devices, and quotes the results of experiments with this method. The experiments were performed with a power press fitted with a dog clutch, in which the dog clutch had been modified so as to make it possible for the ram to be arrested in any position.

"Effect of Toxic Substances on Plant Tissues, as Determined with the Aid of Radioactive Phosphorus P³²."

Bratislava, Biologia, Vol 18, No 7, 1963; pp 489-497.

Abstract [Russian Article, English summary modified]: Branch sections of *Prunus armeniaca* L and *Solanum lycopersicum* dipped into 0.14 M or 0.01 M NH₄OH or 0.01 M fusaric acid with or without 10 ml. aqueous solution of P³²-orthophosphoric acid. Radioactivity appeared in leaves within 2 hours, especially high in the apricot branches; at the 20th hour the activity was much higher in both experimental sets than in controls; at the 48th hour the apricot branchlets were still absorbing P³². Main mode of toxic action was ascribed to interference with closing of stomata. Two drawings, 5 tables; 1 Soviet, 4 Czech (whereof 2 unpublished) and 8 Western references.
